## GAZETTEER OF TOWNS SHOWING POPULATIONS

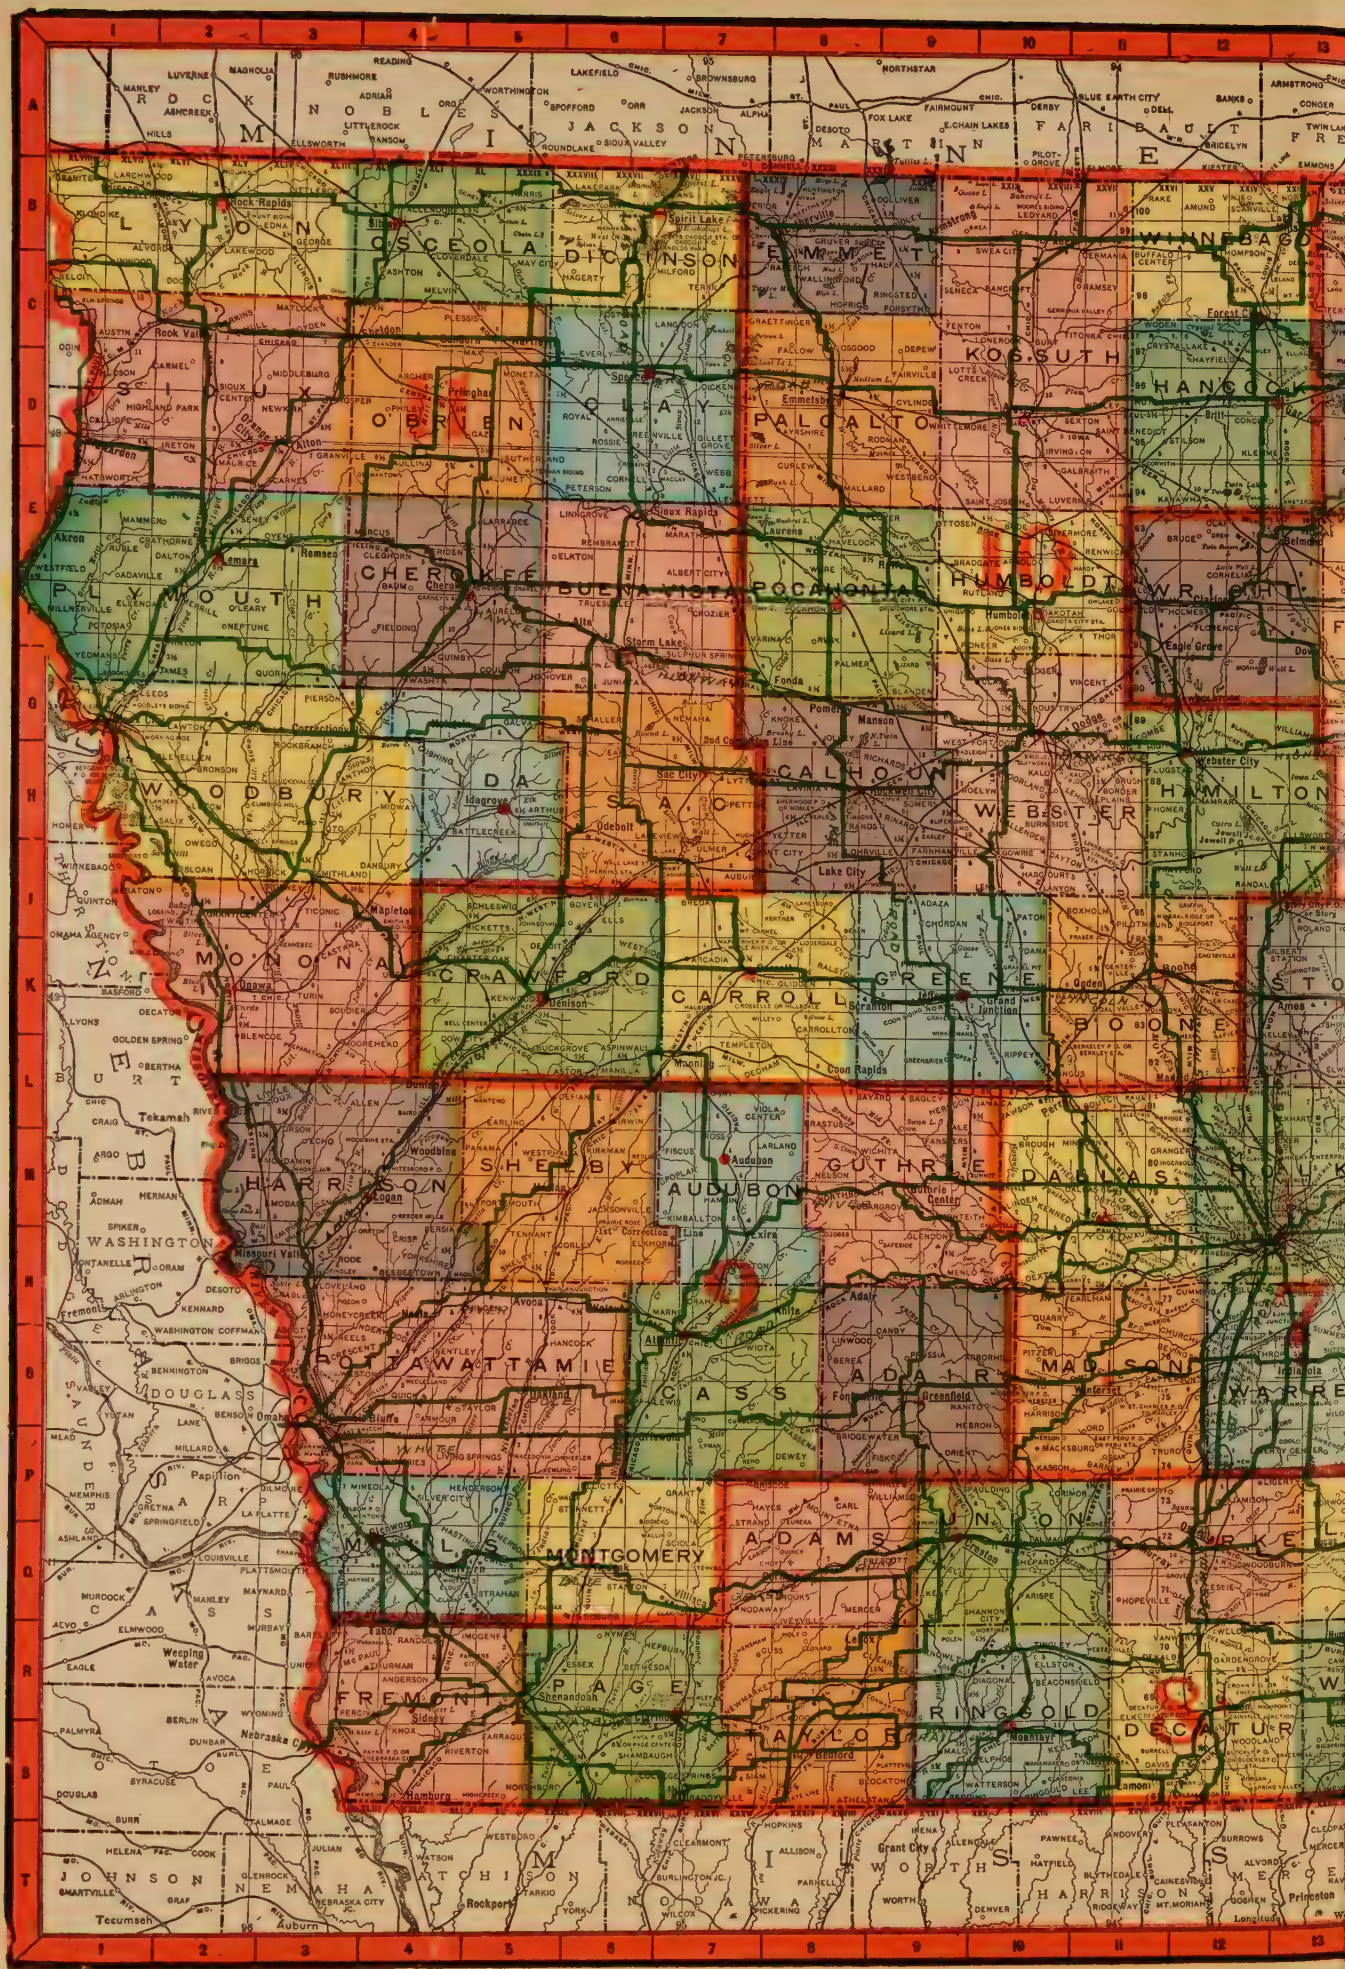

## EXPLANATION OF INDEX.

The letters and numerals signify the location of the town on the map. Corresponding letters and numerals will be found in the margins of the map. To locate a given town on the map, trace a line between the given letter on opposite sides of the map and one between the given numeral on opposite sides of the map, and at or very near the junction of these lines will be found the town desired.

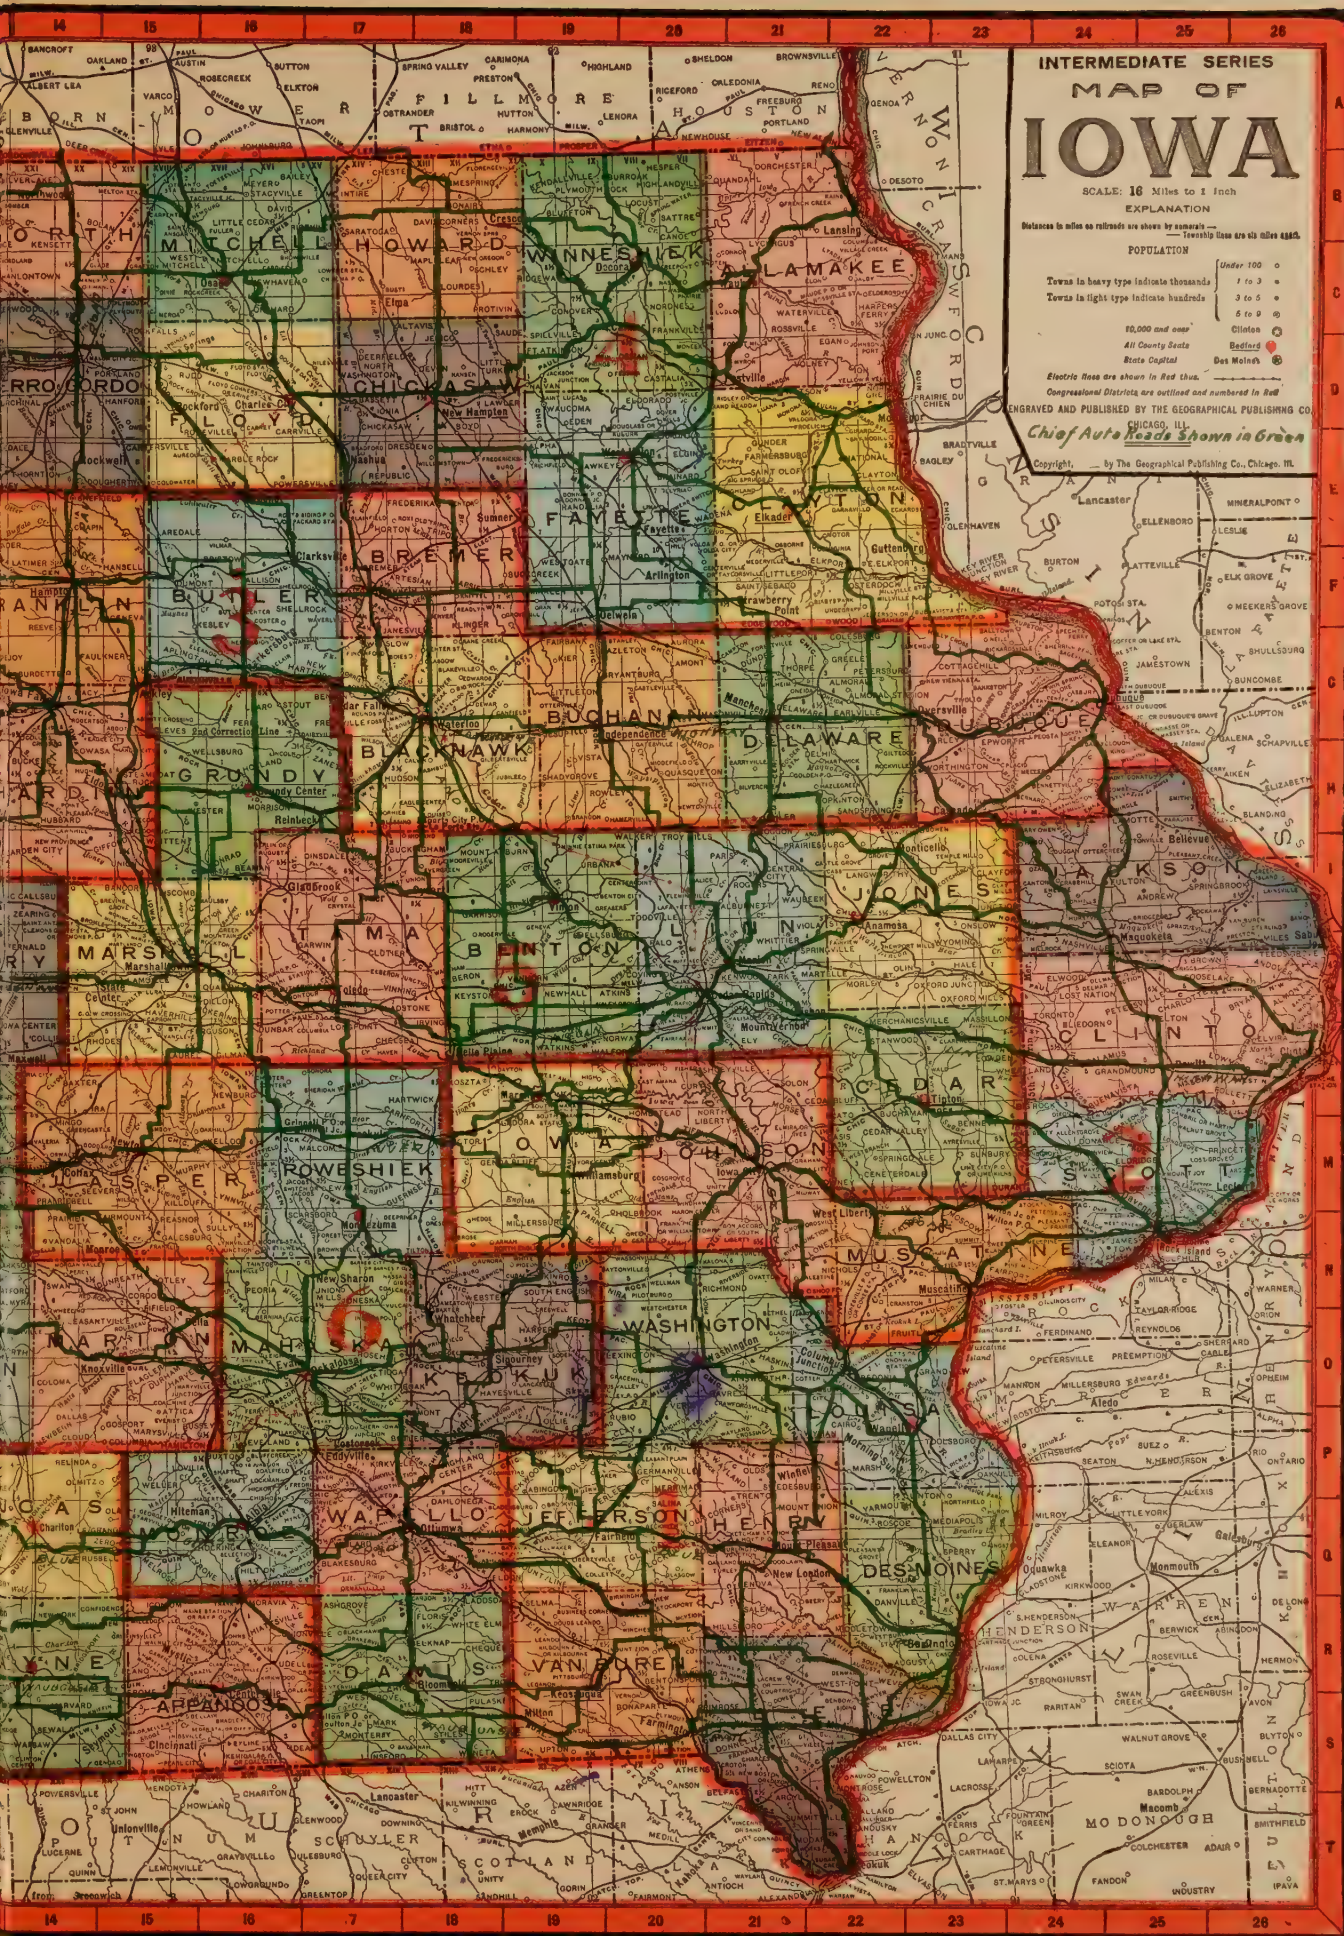

| County.                            | Cong. Dist. | Key. | Area, Sq.<br>Miles. | Pop., 1900. |

INTERMEDIATE SERIES  
MAP OF  
**IOWA**

SCALE: 16 Miles to 1 inch

EXPLANATION

Distances in miles on railroads are shown by numbers.  
Towns in light type indicate thousands.

POPULATION

- |  |           |
|--|-----------|
| Towns in heavy type indicate thousands | Under 100 |
| Towns in light type indicate thousands | 1 to 3    |
|  | 3 to 5    |
|  | 5 to 10   |
| 10,000 and over                        | 10 to 20  |
| All County Seats                       | 20 to 30  |
| State Capital                          | 30 to 40  |
| Des Moines                             | 40 to 50  |

Electric lines are shown in Red lines.

Congressional Districts are outlined and numbered in Red.

TO FIND THE RATE FOR A PACKAGE. Measure the distance in a straight line from the town from which the package is sent to the town to which it is sent. Example: To find the rate for a package sent from Chicago, Ill., to Houston, Texas. By laying a ruler on the map you will find that the distance is 1,000 miles. For that distance the first pound costs 1 cent, each additional pound is 8 cents. Therefore the rate is 1 cent per pound.

|               |           |           |           |           |           |           |           |           |           |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |             |

is sent to the town to which package goes. Then use the Rate Scale  
inches. The Rate Scale shows the number of inches to come within the sixth Zone

See Rate Scale Below

### HOW TO MARK THE ZONES for YOUR TOWN

From your City to the edge of the second Zone is 1 1/2 inches, on this map  
From your City to the edge of the third Zone is 2 1/2 inches  
From your City to the edge of the fourth Zone is 3 1/2 inches  
From your City to the edge of the fifth Zone is 4 1/2 inches  
From your City to the edge of the sixth Zone is 5 1/2 inches  
From your City to the edge of the seventh Zone is 6 1/2 inches  
All territory outside of the seventh Zone is included in the eighth Zone  
By drawing circles on the map complying with the above measurements  
you will have the correct Parcel Post Zones for your town.

# INDEX OF ALL THE CHIEF TOWNS AND CITIES OF OVER 2,000 THE UNITED STATES

[illegible]

## ON MERCATORS PROJECTION

| Area | Country |
|------|---------|
|------|---------|

[illegible]

**JAMES MONROE**

Fifth President of the United States, an early proven champion of political independence throughout the American continent; author of the Doctrine accepted and promulgated by the United States, which popularly bears his name—and whose political policy in international affairs, as a heritage, seems at times to suffer from spinal meningitis among his heirs.

**WOODROW WILSON**

Twenty-seventh President of the United States, during whose tenure of office the Panama Canal work is being completed, and to whose administration there descends the obligation and burden of settling the questions of treaty rights as well as of securing to the United States such effective control as will justify the canal cost and maintenance.

**Count  
FERD. DE LESSEPS**

To whom all honor is due as the Constructor of the Suez Canal and as the pioneer in the construction of the present Panama Canal under such circumstances and with such results as to compel its completion.

**Col. GEO. W. GOETHALS**

"The Great Administrator" and Third and Last Chief Engineer in charge, under whom the work was perfected and accomplished so as to meet the tremendous requirements of the country which caused its being.

**JOHN HAY**

Secretary of State for the United States; indefatigable in his efforts to secure a Panama Canal to the United States; Eminent diplomatic negotiator; Responsible for the Hay-Pauncefote Treaty and the one American Diplomat coming nearest to fulfilling the requirements of the proficient veteran—who only should be employed.

**JOHN F. WALLACE**

The First Engineer in charge of Panama Canal construction, who accomplished the basic work of construction and organization—and quit.

**Col. W. C. GORGAS**

Sanitation Officer, Panama Canal, who reduced the mortality in the canal zone among forty nationalities to as low as obtained in any city of the United States having more than 100,000 inhabitants; who reduced the mortality among Americans in the Canal Zones to 50 per cent of that of the lowest for American cities and who is the one officer of high rank in Panama Canal work in continuous service from the beginning.

**JOHN F. STEVENS**

The second Chief Engineer in charge of Panama Canal work who perfected the equipment and organization and who handed the job over to his successor with the preliminary difficulties overcome and the actual organization and permanent work well under way.

**THEODORE ROOSEVELT**

Twenty-fifth President of the United States to whom the credit is due for obtaining the Canal location and construction, by and for the United States. His own story in his own words as to how the moment of opportunity was improved is: "I took Panama first and let Congress debate it afterwards." History seldom, if ever, has condemned the man who did too much—in the ultimately proven right direction.

**WILLIAM H. TAFT**

Who as Secretary of War had the immediate direction of Panama Canal affairs, and under whose regime as President of the United States, the great bulk of the actual Panama Canal work was done.

# The System of United States Government Land Surveys.

The present system of surveying Government lands, termed the Land System of the United States, has development from an ordinance introduced before the Continental Congress May 7, 1784, termed "An Ordinance for ascertaining the mode of locating and disposing of lands in the Western Territory," and adopted by an act of Congress passed May 7, 1785. It had no precedent in the theory or practice of any pre-existing government, being the result of the highest order of statesmanship, and exhibiting a profound knowledge of engineering science in minute details. With a few unimportant changes, it has been adopted by the Dominion of Canada. The ordinance provided for townships six miles square, containing thirty-six sections one mile square. The region embraced by the surveys under this law forms a part of the present State of Ohio, and is usually styled "Old Seven Ranges." The townships, six miles square, were laid out in ranges extending northward from the Ohio River, the townships being numbered from south to north, and the ranges from east to west. In these initial surveys only the *exterior lines* of the townships were surveyed, and mile corners were established on the township lines, but the plats were marked by subdivisions into sections of one-mile square. The sections were numbered from one to thirty-six, commencing with number one in the *southeast* corner of the township, and running from *south* to *north* in each tier to number thirty-six in the *northwest* corner of the township. These first public surveys were made under the direction of the Geographer of the United States.

The act of Congress approved May 18, 1796, provided for the appointment of a surveyor-general, and directed the survey of the lands northwest of the Ohio River and above the mouth of the Kentucky River, "in which the titles of the Indian tribes have been extinguished." Under this law *one-half* of the townships surveyed were subdivided into sections "by running through the same, each way, parallel lines at the end of every two miles, and by making a corner on each of said lines at the end of every mile," and it further provided that "the sections shall be numbered, respectively, beginning with the number one in the northeast section, and proceeding west and east alternately, through the township, with progressive numbers till the thirty-sixth be completed." This method of numbering the sections is still in use, and can be seen by reference to Diagram No. 2.

The act of Congress, approved February 11, 1805, directs the subdivision of the public lands, into quarter sections, and provides that all the corners marked in the public surveys shall be established as the proper corners of sections or subdivisions of sections which they were intended to designate, and that corners of half and quarter sections *not marked* shall be placed as nearly as possible "equidistant from those two corners which stand on the same line."

The act of Congress, approved April 25, 1812, provided "that there shall be established in the Department of the Treasury an office to be denominated the General Land Office, the chief officer of which shall be called the Commissioner of the General Land Office, whose duty it shall be, under the direction of the head of the department, to superintend, execute, and perform all such acts and things touching or respecting the public lands of the United States and other lands patented or granted by the United States, as have heretofore been directed by law to be done or performed in the office of the Secretary of State, of the Secretary and Register of the Treasury, and of the Secretary of War, or which shall hereafter by law be assigned to the said office."

The act of Congress, approved July 4, 1836, provided for the reorganization of the General Land Office, and that the

executive duties of said office "shall be subject to the supervision and control of the commissioner of the General Land Office under the direction of the president of the United States." The repealing clause is, "That such provisions of the act of the twenty-fifth of April, in the year one thousand eight hundred and twelve, entitled 'An act for the establishment of a General Land Office in the Department of the Treasury,' and of all acts amendatory thereof as are inconsistent with the provisions of this act, be and the same are hereby repealed."

From the wording of this act, it would appear that the control of the General Land Office was removed from the Treasury Department, and that the Commissioner reported directly to the President; but as a matter of fact the Secretary of the Treasury still had supervisory control, for the act of Congress, approved March 3, 1849, by which the Department of the Interior was established, provided "That the Secretary of the Interior shall perform all the duties in relation to the General Land Office, of supervision and appeal, now discharged by the Secretary of the Treasury." By this act the General Land Office was transferred to the Department of the Interior, where it still remains.

## THE RECTANGULAR SYSTEM OF SURVEYS.

The public lands of the United States are ordinarily surveyed into rectangular tracts bounded by lines conforming to the cardinal points. The principal lines are designated as meridian, base, township, range, and section lines, and the bodies of land thus formed are known as townships, sections, and lots. The first recorded use of the terms "township" and "section," as applied to the public lands of the United States, is in an ordinance reported to Congress April 26, 1785.

In Diagram No. 2, representing an entire township, each "*section*" and "*lot*" is plainly indicated.

## INITIAL POINTS.

Initial points from which the lines of the public surveys are to be extended must be established whenever necessary under such special instructions as may be prescribed in each case by the Commissioner of the General Land Office. The locus of such initial points must be selected with great care and due consideration for their prominence and easy identification, and must be established astronomically. The initial point having been established, the lines of the public survey are to be extended therefrom as follows:

## PRINCIPAL MERIDIAN AND BASE LINES

are extended north and south and east and west from the initial point by the use of solar instruments or transits, as may be directed by the Surveyor General. In order to check errors in measurement two sets of chainmen, operating independently of each other, must be employed, and the proper corners established. Principal meridians are designated by number or name. Each has its own base line, and these two lines form the basis or foundation for surveys of all lands within the territory controlled by them.

Ohio public surveys are controlled by several initial points, and by the first principal meridian coincident with the common boundary between Ohio and Indiana. Indiana surveys are controlled by the second principal meridian. Illinois surveys are controlled by the second, third, and fourth principal meridians. Wisconsin by the fourth principal meridian. Minnesota by the fourth and fifth principal meridians. The Dakotas by the fifth and sixth principal meridians, also by the Black Hills meridian. Iowa, Missouri, and Arkansas by the fifth principal meridian. Kansas, Nebraska, and the greater portion of Colorado and Wyoming by the sixth principal meridian. Michigan by the Michigan meridian. Florida by the Tallahassee meridian.

Alabama by the Huntsville and St. Stephens meridians. Mississippi by the St. Stephens, Choctaw, and Washington meridians. Louisiana, east of the Mississippi River, by the St. Helena meridian, and on the west by the Louisiana meridian. New Mexico by the New Mexico meridian. Arizona by the Gila and Salt River meridian. Utah by the Great Salt Lake meridian. Nevada by the Mount Diablo meridian. Idaho by the Boise meridian. Montana by the Montana meridian. California by the Mount Diablo. San Bernardino and the Humboldt meridians. Oregon and Washington by the Willamette meridian.

## TOWNSHIPS AND RANGES.

Township lines are run east and west parallel with and six miles from the base line and from each other, and the spaces between these lines are known as townships north or south, and designated by numbers according to their numerical distance from the base line. Range lines are run north and south on a true meridian, six miles from and parallel, as near as may be, with the principal meridian, and the spaces between them are known as ranges, and are described as east or west of the principal meridian, and consecutively numbered from that line.

Diagram No. 1, will illustrate the system of numbering townships and ranges, north and south and east and west from the principal meridians and base lines; numbering east or west until they reach the next meridian, and north or south until they reach the next base line.

Thus, any certain township or range can readily be found within the territory embraced by this system if the numbers of the same are known referring to principal meridian and base line.

The bodies of land six miles square, formed by the intersection of the township and range lines, are called,

## CONGRESSIONAL TOWNSHIPS,

and contain as near as may be, 23,040 acres: Congressional townships are described and located as being north or south of the base line and east or west of the principal meridian from which that particular survey is made. Thus township one north, range three west of the principal meridian, would be the first township north of the base line and in the third range west from the principal meridian. The law requires that the lines of the public surveys shall be governed by the true meridian, and that the townships shall be *six miles square*, two things involving in connection, a mathematical impossibility, for strictly to conform to the meridian necessarily throws the township out of square by reason of the convergence of the meridians, and hence, by adhering to the true meridian results the necessity of departing from the strict requirements of law, as respects the precise area of townships and the subdivisional parts thereof, the townships assuming something of a trapezoidal form, which inequality develops itself more and more as such, the higher the latitude of the surveys.

For that reason standards and auxiliaries, which are also called correction lines, and auxiliary or guide meridians are run from time to time, and are designated by number, and as north, south, east, or west, as the case may be, from their respective base lines and principal meridians; parallels and auxiliaries are now run at intervals of twenty-four miles, dividing the country into tracts of twenty-four miles square, or sixteen townships.

Congressional townships are subdivided into thirty-six tracts called

## SECTIONS,

each containing as near as may be 640 acres. The thirty-six sections into which a township is subdivided are numbered, commencing with number *one* at the *north-east* angle of the township, and proceeding west to number six, and thence proceeding east to number twelve, and so on,

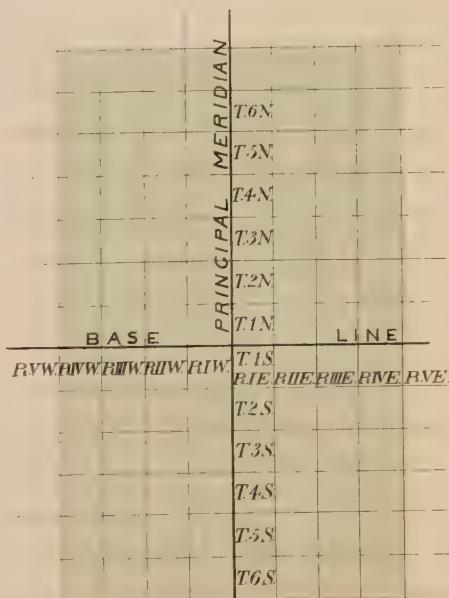

## 2 DIAGRAM

MOUNTAIN STANDARD TIME. CENTRAL STANDARD TIME. EASTERN STANDARD TIME. INTERCOLONIAL STANDARD TIME

alternately, until they number thirty-six in the southeast angle. In all cases of surveys of fractional townships, the sections should bear the same number as they would if the township was full. In all cases where the exterior lines of the townships thus subdivided into sections or half sections shall exceed, or shall not extend, six miles, the excess or deficiency shall be specially noted, and added to or deducted from the western or northern ranges of sections or half sections in such township, according as the error may be in running the lines from east to west, or from south to north; the sections and half sections bounded on the northern and western lines of such townships shall be sold as containing only the quantity expressed in the returns and plats respectively, and all others as containing the complete legal quantity.

Diagram No. 2, shows an entire Congressional Township subdivided and numbered by sections, and showing excess or deficiency in area on the north and west sides of the township.

Sections are divided into quarters by straight lines run from the established quarter section corners—United States surveys to the opposite corresponding corners, and the point of intersection of the lines so run will be the corner common to the several quarter sections, or, in other words, the legal centre of the section; these quarter sections are designated as northeast quarter, northwest, southwest, or southeast according to their location with regard to their common corner.

In the subdivision of quarter sections, the quarter quarter corners are to be placed at points equidistant between the section and the quarter section corners and between the quarter corners and the common centre of the section, *except* on the last half mile of the lines closing on the north or west boundaries of a township, where they should be placed at twenty chains, proportionate measurement, to the north or west of the quarter section corner.

Fractional sections and those containing meandered rivers and lakes are also divided into 40 acre lots, as near as may be, these fractional lots are numbered from one upwards in each section. By an examination of Diagram No. 2, and of the maps on other pages of this work, the careful student will be enabled to describe or locate any piece of land. Numbers 1, 2-6 are the numbers of the meandered lots with areas shown: *a*, north quarter corner; *b*, east quarter corner; *c*, south quarter corner, and *d*, west quarter corner.

Proceeding down stream, the bank on the *left* hand is termed the "left bank" and that on the *right* hand the

"right bank." These terms are to be universally used to distinguish the two banks of a river or stream.

#### RE-ESTABLISHMENT OF LOST CORNERS.

The original corners where they can be found, must stand as the true corners they were intended to represent, even though not exactly where strict professional care might have placed them in the first instance.

Missing corners should be re-established in the identical localities they originally occupied. When the point cannot be determined by the existing landmarks in the field, resort must be had to the field notes of the original survey. The law provides that the lengths of the lines, as stated in the field notes, shall be considered as the true lengths thereof, and the distances between corners set down in the field notes constitute proper data from which to determine the true locality of a missing corner; hence the rule that all such should be restored at distances proportionate to the original measurements between existing original corners. That is, if the measurements between two existing corners differs from that stated in the field notes, the excess or deficiency should be distributed proportionately among the intervening section lines between the said existing corners standing in their original places. Missing corners on standard township and range lines should be restored by proportionate measurement between the nearest existing original corners on those lines. Missing section corners in the interior of townships should be re-established at proportionate distances between the nearest existing original corners *north* and *south* of the missing corners.

As has been observed, no existing original corner can be disturbed, and it will be plain that any excess or deficiency in measurements between existing corners cannot in any degree affect the distances beyond said existing corners, but must be added or subtracted proportionately to or from the intervals embraced between the corners which are still standing.

#### OFFICIAL SUBDIVISIONS BY COUNTY OFFICIALS.

Various states require their county auditors or recorders to cause a survey and plat of "irregular tracts" of land to be made and placed upon record, when, for assessment purposes, the descriptions are too indefinite. These become official, and title will pass as the same appear of record, by the number of each lot being given on the plat.

Diagram No. 3, on reverse page, shows a practical subdivision of a section for assessment or other purposes, with a proper description of each fractional part of the quarter section.

#### METES AND BOUNDS.

In the Eastern and New England States the system of surveying and describing lands by metes and bounds as followed prior to the establishment of the rectangular system of surveys still exists. The system at its best is imperfect and uncertain in its working, having no known lines for base of surveys, and seldom any official plats for references as to initial points. Diagram No. 4 shows a tract of land described and platted by "metes and bounds," as the same would appear in deeds.

#### STANDARD TIME.

What is known as the "new standard time," was adopted by agreement of all the principal railroads of the United States at 12 o'clock, noon, on Nov. 18, 1883. The system divides the Continent into five longitudinal belts, and establishes a meridian of time for each belt. These meridians are fifteen degrees of longitude, corresponding to one hour of time, apart.

Eastern Maine, New Brunswick, and Nova Scotia use the 60th meridian; the Canadas, New England, the Middle States, the Virginias, and the Carolinas use the 75th meridian which is that at Philadelphia; the states of the Mississippi Valley, Alabama, Georgia, Florida, and westward, including Texas, Kansas, and the larger part of Nebraska and the Dakotas, use the 90th meridian, which is that of New Orleans; the Territories to the western border of Arizona and Montana use the 105th meridian, which is that of Denver; and the Pacific States use the 120th meridian.

The time divisions are known as intercolonial, eastern, central, mountain, and Pacific standard time.

A traveler passing from one belt to another will find his watch one hour too fast or too slow, according to the direction in which he is going. If traveling westward, his watch will be one hour faster; if eastward bound, it will be one hour slower than the belt which he enters.

This change of system reduced the time standards used by the different railroads from fifty-three to five, a great convenience to the railroads and traveling public.

The suggestion leading to the adoption of this new system originated with professor Abbe, of the Signal Bureau at Washington, and was elaborated by Dr. F. A. P. Barnard of Columbia College, New York. The scheme was proposed in 1878, but was not adopted until it had been submitted to a number of scientific associations at home and abroad, and received their approval.

NEB., TUESDAY, JULY 19, 1927.

## THE AMERICAN FLAG

When Freedom, from her mountain height,  
Unfurled her standard to the air,  
She tore the azure robe of night,  
And set the stars of glory there;  
She mingled with its gorgeous dyes  
The milky baldric of the skies,  
And striped its pure celestial white  
With streakings of the morning light;  
Then, from his mansion in the sun,  
She called her eagle bearer down,  
And gave into his mighty hand  
The symbol of her chosen land.

Majestic monarch of the cloud,  
Who rear'st aloft thy regal form,  
To hear the signal trumpet tone,  
And see the lightning lances driven,  
When strive the warriors of the storm,  
And rolls the thunder-drum of heaven,  
Child of the sun to thee 'tis given,  
To guard the banner of the free,  
To hover in the sulphur smoke,  
To ward away the battle stroke,  
And bid its blendings shine afar,  
Like rainbows on the cloud of war,  
The harbingers of victory.

Flag of the brave! thy folds shall fly,  
The sign of hope and triumph, high,  
When speaks the signal trumpet tone,  
And the long line comes gleaming on;  
Ere yet the life-blood, warm and wet,  
Has dimmed the glistening bayonet,  
Each soldier eye shall brightly turn  
To where thy sky-born glories burn,  
And, as his springing steps advance,  
Catch war and vengeance from the glance,  
And when the cannon-mouthings loud  
Heave in wild wreaths the battle-shroud,  
And gory sabers rise and fall  
Like shoots of flame on midnight's pall—  
Then shall thy meteor glances glow,  
And covering foes shall sink beneath  
Each gallant arm that strikes below  
That lovely messenger of death.

Flag of the seas! on ocean wave  
Thy stars shall glitter o'er the brave;  
When death, careering on the gale,  
Sweeps darkly round the belled sail,  
And frightened waves rush wildly back  
Before the broadside's reeling rack,  
Each dying wanderer of the sea  
Shall look at once to heaven and thee,  
And smile to see thy splendors fly  
In triumph o'er his closing eye.

Flag of the free heart's hope and home,  
By angel hands to valor given,  
Thy stars have lit the welkin dome,  
And all thy hues were born in heaven.  
Forever float that standard-sheet!  
Where breathes the foe but falls before us,  
With Freedom's soil beneath our feet,  
And Freedom's banner streaming o'er us.  
—Joseph Rodman Drake.

\* \* \*

When clouds hang low and troubles come,  
Smile some,  
When you feel blue and hurt and sore,  
Smile more,  
When all your happiness seems marred,  
Smile hard,  
When you feel you cannot smile,  
Smile a mile.  
—Della Esther.

Sampson, a minor; Clarence Moon and Glenn Moon, minors; Ira Allen and wife, Anna Allen; Quentin Allen, Harry Allen and Maxine Allen, minors; Arthur Meredith; Edna Meredith and Gaylord Meredith, minors; William Russell Allen and wife, Perle Allen; Clyde Allen, William Allen, Jr., and Betty Jane Allen, Jr., minors; Mary Allen and Jean Allen, minors; Effie Francis Allen; Avery R. Allen and Maurine Allen, his wife; Mrs. J. B. Traylor, widow of J. H. Traylor, deceased; and the unborn and unknown heirs, legatees, and devisees of the above named defendants and the unborn and unknown claimants of the Northwest Quarter of the Northwest Quarter, and the North 32 acres of the Northeast Quarter of the Northwest Quarter of Section Twenty-nine (29), Township Seventy-seven (77), Range Thirty-seven (37), West of the 5th P. M., Cass County, Iowa.

Defendants.

To: Each and all of the above named defendants in the above entitled action:—

You and each of you are hereby notified that on or before the sixteenth day of September, 1927, there will be on file in the office of the Clerk of the District Court of Cass County, Iowa, the petition of the above named plaintiff, General Properties Corporation, claiming that it is the absolute and unqualified owner in fee simple of the Northwest Quarter of the Northwest Quarter and the North 32 acres of the Northeast Quarter of the Northwest Quarter of Section Twenty-nine (29), Township Seventy-seven (77), Range Thirty-seven (37), West of the 5th P. M., Cass County, Iowa, and claiming and asking that its title and estate therein be established against the adverse claims of each and all of the above named persons and defendants, and their unborn and unknown heirs and claimants and that all persons claiming by, through or under them be forever barred and estopped from claiming any right, title or interest therein adverse to plaintiff in and to said premises, and that title thereto be quieted in plaintiff.

The plaintiff further asks that the partition proceeding No. 6204 in the District Court of Cass County, Iowa, be found and decreed to be valid and binding on all parties thereto and that the Court be found and decreed to have had full and complete jurisdiction therein; that the Court find that the plaintiff and its grantors have been in actual, open, visible, notorious, peaceable, undisputed, continuous and adverse possession of all said real estate, claiming such under color of title and claim of ownership for more than ten years last past.

For full particulars see petition when on file.

Now, unless you appear thereto and defend before noon of the second day of the next term of Court to be held at Atlantic, in Cass County, Iowa, commencing on the 27th day of September, 1927, default will be entered against you and judgment and decree will be rendered thereon in accordance with the prayer of said petition.
